CLASS : III

DATE : 11.11.24

CHAPTER : 18, The Invention Of An Aeroplane

TEACHER : Pamelpreet

Good morning students

Students this lesson is for Class III for the subject of English Literature in which Ch-18 The Invention Of an Aeroplane is covered and is being submitted to you on 11.11.24

Two little boys waited eagerly for their father's return from a trip in their house in Dayton, Ohio in the United States of America. They wondered what gift he would bring for them this time. Their father brought a glider for them. As they watched the glider fly in their room, they had a dream of building an aeroplane some day. Both Wilbur and Orville loved machines and tools. Their father owned a printing press. Both the brothers worked at the press and when the machine broke down, they fixed it. When they were twenty years old, they opened a cycle shop. They worked together but still thinking of <sup>the</sup> dream of making an aeroplane. They made their first glider and took it to Kitty Hawk in North Carolina. They worked

very hard but it did not take a lot of time in the air. They made changes many times to improve it. Finally Wilbur and Orville were again at Kitty Hawk with their aeroplane. So, on December 17, 1903, the first aeroplane lifted off the ground. The large crowd that had gathered to watch the event burst into cheers. When the two brothers came back home to Dayton from Kitty Hawk, there was a large crowd to welcome them at the station. The streets were decorated with balloons, banners and flags. Bells rang out from every church in Dayton and they were given a thirty-gun salute. The whole America was proud of the two brothers.

### HOMEWORK

Read L-18 The Invention of an Aeroplane twice.
