Date- 15.07.24

Ch- 2 "GUI Operating System- An Introduction"

Teacher- Rupinder Kaur

Good Morning Students,

Students This lesson is for class-3 for the subject of Computers, Topic - 'Shutting down a computer' which is covered in chapter-2

- All the students, May now please open page no- 25 in front of them.
- I hope all the students are ready for today's lesson. So let us start with the topic.

→ Shutting down a Computer:- Students, All of you have read how to switch on a computer. Now you will learn how to switch off or shut down a computer with the help of given steps:-

1. Click on start button.
2. Select shut down button.

Tender Heart High School, Sec-33, Chd.

Ch- 2 "GUI Operating System- An Introduction"

Teacher- Rupinder Kaur

3. After some time, Computer turns off automatically.
4. Switch off the monitor button.
5. Switch off the UPS button.
6. Switch off the main power supply button.

→ Power Modes of Windows 7:- Students, there are various ways to shut down your computer. These are:-

1. Turn off the PC completely
2. Make it sleep
3. Hibernates the PC.

We will discuss these one by one.

→ Sleep:- Students, sleep is a power saving state. In this mode, windows will save the work automatically and turns the computer off, if battery is too low. You will get back your same screen in which you were working after computer resumes full power and you start your work again.

Ch- 2 "GUI Operating System- An Introduction"

Teacher- Rupinder Kaur

→ Hibernate Mode:- Students, this mode uses less power than sleep mode. It is used to save all open documents and applications on the hard disk and after saving only shuts down the computer.

* children, all of you may now take 3 minutes break, during break time you will give answers for some questions and write in your document. And the questions are:-

Q:-1. where you can save all open documents and applications in hibernate mode?

Q:-2. Give different ways to shut down your PC.

let me give you answers first and the answers are-

Ans:-1. on the hard disk.

Ans:-2. Different ways are:- 1. Turn off the PC completely.

2. Make it sleep

3. Hibernate the PC.

* children, next topic is - Normal Mode & Safe Mode. we are going to discuss these one by one.

→ Normal Mode:- Students, this is the default operation mode of windows - whenever you start your computer, windows will appear in ^{normal} mode; with loading of files and drives; high resolution and colours. and no label will be displayed like - Safe Mode.

→ Safe Mode:- Students, while working on computer, if any trouble comes; then this mode will work like diagnostic mode. In this windows loads with a limited set of files and drives for Input/output operations. Resolution will be low and colours will be limited in this mode. If safe mode is on then label 'safe mode' will appear on all the corners of desktop. Students, you should always work in Normal mode of windows.

* children, Now I am ending the lesson here, Read the lesson carefully and try to solve Q-A, B, C and D

Thank you...
