

Class-VI

Subject: Biology

Chapter: 7

Disease and Hygiene.

Teacher: Nirmita.

Good Morning Children! This lesson is of class-VI, Subject: Biology, Chapter-7, Disease and Hygiene of your textbook Concise Biology, Sline Publications. It is being submitted to you on **9th December, 2024**

Today, we are going to study about Disease and Hygiene.

Health: Health is defined as a state of complete physical, mental and social well-being.

Disease: It means not being in a comfortable state.

Categories of diseases:-

a) Non-communicable diseases:- These do not spread from one person to another. Example: Rickets, Diabetes etc.

b) Communicable diseases:- These diseases spread from an infected person to a healthy person. Example: Viral fever, Malaria.

Non-communicable diseases (types):-

(i) Dietary deficiency diseases:
Protein deficiency disease: Kwashiorkor

Class VI

Chapter-7

Subject: Biology

Disease and Hygiene

is caused due to protein deficiency and marasmus is caused due to deficiency of proteins, carbohydrates and fats.

(ii) Vitamin deficiency diseases:- Vitamins are required in small amount in the body. Lack of vitamins in the body lead to disease.

(iii) Mineral deficiency disease:- Lack of minerals also lead to disease.

2) Allergy:- It is caused due to response to off an allergen. Example are asthma, diarrhoea etc.

3) Diseases caused due to physical and chemical agents. Sunburn and heat stroke are examples of some diseases caused by physical agents. Chemical agents also cause diseases.

Spread of Communicable Diseases:

- Direct contact with an infected person.
- Touching and sharing items.
