

Tender Heart High School
Sector 33B, Chandigarh

Name: Varun Sathotra

Date: 17/2/25

Subject: Geography

class: IX

Ch-17 (continue)

Saving Energy

- conserving energy leads to reduce energy and pollution.
- banning of harmful products or replacing it with substitutes also result in reducing pollution.
- Renewable resources such as Solar, wind, Hydro should be used.
- Nuclear energy program should be initiated as it cause very minor pollution.

NEERI

- under NAAQM, CPCB has entrusted to NEERI the work for monitoring ambient air quality to develop long term database for Urban centres such as Nagpur, Delhi, Kolkata etc.
- In this programme, air samples are collected and analysed for 8 days in a month monitoring gaseous parameters and particulate matter.

Organic Farming

It is a technique that involves cultivation of plants and rearing of Animals in natural ways.

Features of Organic Farming

- protecting soil quality.
- indirect provision of crop nutrient using soil microorganisms.
- Nitrogen fixation in soils using soil micro-organisms.
- care for larger environment and conservation of natural habitats and wildlife.
